The Honda K-series engine is a line of four-cylinder four-stroke car engine introduced in 2001. The K-series engines are equipped with DOHC valvetrains and use roller rockers to reduce friction. The engines use a coil-on-plug, distributorless ignition system with a coil for each spark plug. This system forgoes the use of a conventional distributor-based ignition timing system in favor of a computer-controlled system that allows the ECU to control ignition timings based on various sensor inputs.

The Honda K series of engines is one of our favorites and one of the top production inline 4 engines ever produced in our opinion. Last year we built a turbo K24 Z7 for a giveaway by Motovicity. With the turbo project being put to bed we got another opportunity to build a K motor, this time in the form of a naturally aspirated K24 Z7.

The B- and K-series engines both have thoroughly over-engineered blocks that can live with gobs more horsepower than Honda ever intended. But, when compared side-by-side, the K-series is clearly the more innovative and perfected platform — and why wouldn't it be? It's ten years the junior and the natural evolution of the B-series motor.
