Presents the essentials of Key Stage 3 English. This work equips students for the National Curriculum tests at KS3 in English. It includes comprehensive sections on reading, writing and Shakespeare.

Teaching Mathematics is nothing less than a mathematical manifesto. Arising in response to a limited National Curriculum, and engaged with secondary schooling for those aged 11–14 (Key Stage 3) in particular, this handbook for teachers will help them broaden and enrich their students' mathematical education. It avoids specifying how to teach, and focuses instead on the central principles and concepts that need to be borne in mind by all teachers and textbook authors—but which are little appreciated in the UK at present.This study is aimed at anyone who would like to think more deeply about the discipline of 'elementary mathematics', in England and Wales and anywhere else. By analysing and supplementing the current curriculum, Teaching Mathematics provides food for thought for all those involved in school mathematics, whether as aspiring teachers or as experienced professionals. It challenges us all to reflect upon what it is that makes secondary school mathematics educationally, culturally, and socially important.

It seemed like any other season on Mount Everest. Ten expeditions from around the world were preparing for their summit push, gathered together to try for mountaineering's ultimate prize. Twenty-four hours later, eight of those climbers were dead, victims of the most devastating storm ever to hit Everest. On the North face of the mountain, a British expedition found itself in the thick of the drama. Against all odds, film-maker Matt Dickinson and professional climber Alan Hinkes managed to battle through hurricane-force winds to reach the summit. In Death Zone, Matt Dickinson describes the extraordinary event that put the disaster on the front cover of Time and Newsweek. The desperate attempts of teams on the southern side of the mountain, fatal errors that led to the deaths of three Indian climbers on the North Ridge and the moving story of Rob Hall, the New Zealand guide who stayed with his stricken client, and paid with his life. Based on interviews with the surviving climbers and the first-hand experience of having lived through the killer storm, this gripping non-fiction book tackles issues at the very heart of mountaineering. Death Zone is an extraordinary story of human triumph, folly and disaster.

Before The Perfect Storm, before In the Heart of the Sea, Steven Callahan's dramatic tale of survival at sea was on the New York Times bestseller list for more than thirty-six weeks. In some ways the model for the new wave of adventure books, Adrift is an undeniable seafaring classic, a riveting firsthand account by the only man known to have survived more than a month alone at sea, fighting for his life in an inflatable raft after his small sloop capsized only six days out. "Utterly absorbing" (Newsweek), Adrift is a must-have for any adventure library.

This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination.Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently.This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.

Experience the riveting, dystopian Uglies series seen as never before—through the eyes of Shay, Tally Youngblood's closest and bravest friend, who refuses to take anything about society at face value. "From the moment we are born, we are considered threats in need of 'special' management. We are watched and shaped and exploited by a force most of us never see. . . . All to keep us safe. . . . Do you feel safe?! Or do you feel like you're in a cage?"—Shay In Pretties, Tally Youngblood and her daring best friend, Shay, both underwent the operation that turned them from ordinary Uglies into stunning beauties. Now this thrilling new graphic novel reveals Shay's perspective on living in New Pretty Town . . . and the way she sees it, there's more to this so-called paradise than meets the eye. With the endless parties and custom-made clothes, life as a Pretty should be perfect. Yet Shay doesn't feel quite right. She has little to no memory of her past; it's as if something in her brain has inexplicably changed. When she reunites with Tally and the Crims—her rebellious group of friends from Uglyville—she begins to recall their last departure to the wild, and the headstrong leader she used to be. And as she remembers the truth about what doomed their escape, Shay decides to fight back—against the status quo, against the mysterious Special Circumstances, even against her own best friend.
