The thermal decomposition mechanism of vaporized CpZr(NMe<sub>2</sub>)<sub>3</sub>, which has been confirmed by using our newly developed in situ monitoring systems, is expected to provide very useful information for ALD process optimization and new precursor design. Also, we try to suggest that expected mechanisms, and it showed that the in situ monitoring systems are useful to understand the reaction mechanism including thermal decomposition in the gas phase of various materials.

Abstract. Design of precursors for thin film growth by chemical vapor deposition (CVD) can be informed by knowledge of the precursor decomposition mechanism. However, the vast majority of decomposition characterization is done by techniques that do not capture CVD conditions. This work used a custom CVD reactor with in situ Raman spectroscopy capabilities to investigate the gas phase thermal decomposition of the tungsten imido complex Cl<sub>4</sub>(CH<sub>3</sub>CN)WN i Pr, a known precursor for the ...

From in situ scanning/transmission electron microscopy, decomposition of 2D BP is observed to occur at ?400 °C in vacuum, in contrast to the 550 °C bulk BP sublimation temperature. This decomposition initiates via eye-shaped cracks along the direction and then continues until only a thin, amorphous red phosphorus like skeleton remains.

Pyrolysis is the thermal decomposition of materials at elevated temperatures in an inert atmosphere. It involves a change of chemical composition. The word is coined from the Greek-derived elements pyro "fire" and lysis

"separating".. Pyrolysis is most commonly used in the treatment of organic materials. It is one of the processes involved in charring wood. In general, pyrolysis of organic ...

Details of the thermal decomposition of  $\gamma$ -Al<sub>2</sub>O<sub>3</sub> and  $\delta$ -Al<sub>2</sub>O<sub>3</sub> have been investigated by in situ synchrotron X-ray diffraction at a constant heating rate of 1 K/min and isothermally in dynamical vacuum. The  $\gamma$ -Al<sub>2</sub>O<sub>3</sub> transforms into  $\delta$ -Al<sub>2</sub>O<sub>3</sub> prior to decomposing to Al and O<sub>2</sub>.
