Includes a DVD-ROM with tests, test generator, teacher-support videos and a separate disc providing access to the Digibook. This is a page-faithful, digital version of the Student's Book with embedded audio designed for classroom use. Teachers can utilise the answer keys, use the zoom tool and link to explanations for the grammar database.

Libro para el alumno con código de acceso a "Laser Practice Online" con práctica adicional online de exámenes que permite a los estudiantes y sus profesores evaluar y realizar un seguimiento de los progresos.

The most current aviation maintenance technician general textbook available. Written to the new FAR part 147 standards. Expanded to include a complete section on electrical generators and motors, new hardware, and nonmetallic components. Many new tables, charts, and illustrations, including: abrasives, corrosion removal and treatment, corrosion points, helicopter weight and balance, and others. The 2004 revision includes additional metric hardware nomenclature and electronic tools, including internet research applications.

Destination B1: Grammar and Vocabulary has been designed for intermediate students at B1 (Threshold) level on the Council of Europe's Common European Framework Scale. It is the ideal grammar and vocabulary practice books for all students preparing to take any B1 level exam: e.g. Cambridge PET and for students working towards B2 level exams in the future.

This is a new level in the Laser series, designed to help students in the transition towards more exam-

related study. The Audio CD contains all the songs featured in the Student's Book for classroom

Optical frequency combs (OFC) have revolutionized various applications in applied and fundamental sciences that rely on the determination of absolute optical frequencies and frequency differences. The latter requires only stabilization of the spectral distance between the individual comb lines of the OFC, allowing to tailor and reduce system complexity of the OFC generator (OFCG). One such application is the quantum test of the universality of free fall within the QUANTUS experimental series. Within the test, the rate of free fall of two atomic species, Rb and K, in micro-gravity will be compared. The aim of this thesis was the development of a highly compact, robust, and space-suitable diode laser-based OFCG with a mode-locked optical spectrum in the wavelength range around 780 nm. A diode laser-based OFCG was developed, which exceeds the requirements with a spectral bandwidth > 16 nm at 20 dBc, a comb line optical power > 650 nW (at 20 dBc), a pulse repetition rate of 3.4 GHz, and an RF linewidth of the free-running pulse repetition rate
