Transform your students into smart, savvy consumers of the media. Mass Communication: Living in a Media World (Ralph E. Hanson) provides students with comprehensive yet concise coverage of all aspects of mass media, along with insightful analysis, robust pedagogy, and fun, conversational writing. In every chapter of this bestselling text, students will explore the latest developments and current events that are rapidly changing the media landscape. This newly revised Sixth Edition is packed with contemporary examples, engaging infographics, and compelling stories about the ways mass media shape our lives. From start to finish, students will learn the media literacy principles and critical thinking skills they need to become savvy media consumers.

A comprehensive introduction to the basic principles, design techniques and analytical tools of wireless communications.

The area of communication and computer networks has become a very active field of research by the control systems community in the last years. Tools from convex optimization and control theory are playing increasing roles in efficient network utilization, fair resource allocation, and communication delay accommodation and the field of Networked Control systems is fast becoming a mainstay of control systems research and applications. This carefully edited book brings together solicited contributions from experts in the various areas of communication/control networks referring to both networks under control (control in networks) as well as networked control systems (control over networks). The aim of this book is to reverse the trend of fragmentation and specialization in Communication Control Networks connecting various interdisciplinary research fields including control, communication, applied mathematics and computer science.

This book covers theory, methodology and applications of computer networks, network protocols and wireless networks, data communication technologies, and network security. The book is based on the proceedings from the Fifth International Conference on Networks & Communications (NetCom). The proceedings will feature peer-reviewed papers that illustrate research results, projects, surveys and industrial experiences that describe significant advances in the diverse areas of computer networks & communications.

Intercultural Communication: A Contextual Approach introduces students to the fundamental topics, theories, concepts, and themes of intercultural communication. Best-selling author James W. Neuliep presents a clear model for examining communication within a variety of contexts, including cultural, microcultural, environmental, sociorelational, and perceptual. Each chapter focuses on one context and explores the combination of factors within that context, including setting, situation, and circumstances. The updated Eighth Edition reflects the most recent research in the field and further incorporates the role of modern technology and its impact on intercultural communication.

This book results from many years of teaching an upper division course on communication networks in the EECS department at the University of California, Berkeley. It is motivated by the perceived need for an easily accessible textbook that puts emphasis on the core concepts behind current and next generation networks. After an overview of how today's Internet works and a discussion of the main principles behind its architecture, we discuss the key ideas behind Ethernet, WiFi networks, routing, internetworking, and TCP. To make the book as self-contained as possible, brief discussions of probability and Markov chain concepts are included in the appendices. This is followed by a brief discussion of mathematical models that provide insight into the operations of network protocols. Next, the main ideas behind the new generation of wireless networks based on LTE, and the notion of QoS are presented. A concise discussion of the physical layer technologies underlying various networks is also included. Finally, a sampling of topics is presented that may have significant influence on the future evolution of networks, including overlay networks like content delivery and peer-to-peer networks, sensor networks, distributed algorithms, Byzantine agreement, source compression, SDN and NFV, and Internet of Things.

This book focuses on techniques that can be applied at the physical and data-link layers of communication systems in order to secure transmissions against eavesdroppers. Topics ranging from information theory-based security to coding for security and cryptography are discussed, with presentation of cutting-edge research and innovative results from leading researchers. The characteristic feature of all the contributions is their relevance for practical embodiments: detailed consideration is given to applications of security principles to a variety of widely used communication techniques such as multiantenna systems, ultra-wide band communication systems, power line communications, and quantum key distribution techniques. A further distinctive aspect is the attention paid to both unconditional and computational security techniques, providing a bridge between two usually distinct worlds. The book comprises extended versions of contributions delivered at the Workshop on Communication Security, held in Ancona, Italy, in September 2014 within the framework of the research project "Enhancing Communication Security by Cross-layer Physical and Data-link Techniques", funded by the Italian Ministry of Education, Universities, and Research.

The objective of GCN 2011 is to facilitate an exchange of information on best practices for the latest research advances in the area of green communications and networks, which mainly includes the intelligent control, or efficient management, or optimal design of access network infrastructures, home networks, terminal equipment, and etc. Topics of interests include network design methodology, enabling technologies, network components and devices, applications, others and emerging new topics.

In order to succeed in today?s competitive environment, it?s imperative that students learn how to speak and write effectively for the business world. Presented in clear, everyday language, Business Communication, Canadian Edition takes the basic concepts that every business professional must know and conveys them in an accessible, easy to understand format. Students will also learn strategies and tools, for successfully applying their communication skills to achieve their goals. To meet the needs of a diverse student population, Business Communication, Canadian Edition focuses on the fundamentals, identifies core competencies and skills, and promotes independent learning. The book is organized using a four-step learning process called the CASE Learning System (Content, Analysis, Synthesis, Evaluation). Based on Bloom's Taxonomy of Learning, CASE presents key business communication topics in easy-to-follow chapters. As a result, students not only achieve academic mastery of business communication topics, but they master real-world business communication skills.

In its fifth Canadian edition, Interplay: The Process of Interpersonal Communication offers an immersive approach to the study of communication that foregrounds usefulness, readability, and student engagement. With up-to-date scholarship, case studies, and real-world examples, Interplayemphasizes the shifting dimensions of interaction made possible by social media and changing communication norms. Interplay is attentive to the ways in which communication practices shape and are shaped by culture, gender, and context; with extensive pedagogy integrated into its chapters, the bookencourages readers to apply its insights to their own lives and relationships both within and beyond the classroom.
