This work explores diverse cultural understandings of food practices in cities through the senses, drawing on case studies in the Americas, Asia, Australia, and Europe. The volume includes the senses within the popular field of urban food studies to explore new understandings of how people live in cities and how we can understand cities through food. It reveals how the senses can provide unique insight into how the city and its dwellers are being reshaped and understood. Recognising cities as diverse and dynamic places, the book provides a wide range of case studies from food production to preparation and mediatization through to consumption. These relationships are interrogated through themes of belonging and homemaking to discuss how food, memory, and materiality connect and disrupt past, present, and future imaginaries. As cities become larger, busier, and more crowded, this volume contributes to actual and potential ways that the senses can generate new understandings of how people live together in cities. This book will be of great interest to students and scholars of critical food studies, urban studies, and socio-cultural anthropology.

One of Planetizen's Top Planning Books for 2017 - San Francisco Chronicle's 2016 Holiday Books Gift Guide Pick What makes a great city? City planner and architect Alexander Garvin set out to answer this question by observing cities, largely in North America and Europe, with special attention to Paris, London, New York, and Vienna. For Garvin, greatness is about what people who shape cities can do to make a city great. A great city is a dynamic, constantly changing place that residents and their leaders can reshape to satisfy their demands. Most importantly, it is about the interplay between people and public realm, and how they have interacted throughout history to create great cities. What Makes a Great City will help readers understand that any city can be changed for the better and inspire entrepreneurs, public officials, and city residents to do it themselves.

Global Urbanism is an experimental examination of how urban scholars and activists make sense of, and act upon, the foundational relationship between the 'global' and the 'urban'. What does it mean to say that we live in a global-urban moment, and what are its implications? Refusing all-encompassing answers, the book grounds this question, exploring the plurality of understandings, definitions, and ways of researching global urbanism through the lenses of varied contributors from different parts of the world. The contributors explore what global urbanism means to them, in their context, from the ground and the struggles upon which they are working and living. The book argues for an incremental, fragile and in-the-making emancipatory urban thinking. The contributions provide the resources to help make sense of what global urbanism is in its varieties, what's at stake in it, how to research it, and what needs to change for more progressive urban futures. It provides a heterodox set of approaches and theorisations to probe and provoke rather than aiming to draw a line under a complex, changing and profoundly contested set of global-urban processes. Global Urbanism is primarily intended for scholars and graduate students in geography, sociology, planning, anthropology and the field of urban studies, for whom it will provide an invaluable and up-to-date guide to current thinking across the range of disciplines and practices which converge in the study of urbanism.

Imagine waking up to the gentle noises of the city, and moving through your day with complete confidence that you will get where you need to go quickly and efficiently. Soft City is about ease and comfort, where density has a human dimension, adapting to our ever-changing needs, nurturing relationships, and accommodating the pleasures of everyday life. How do we move from the current reality in most cities—separated uses and lengthy commutes in single-occupancy vehicles that drain human, environmental, and community resources—to support a soft city approach? In Soft City David Sim, partner and creative director at Gehl, shows how this is possible, presenting ideas and graphic examples from around the globe. He draws from his vast design experience to make a case for a dense and diverse built environment at a human scale, which he presents through a series of observations of older and newer places, and a range of simple built phenomena, some traditional and some totally new inventions. Sim shows that increasing density is not enough. The soft city must consider the organization and layout of the built environment for more fluid movement and comfort, a diversity of building types, and thoughtful design to ensure a sustainable urban environment and society. Soft City begins with the big ideas of happiness and quality of life, and then shows how they are tied to the way we live. The heart of the book is highly visual and shows the building blocks for neighborhoods: building types and their organization and orientation; how we can get along as we get around a city; and living with the weather. As every citizen deals with the reality of a changing climate, Soft City explores how the built environment can adapt and respond. Soft City offers inspiration, ideas, and guidance for anyone interested in city building. Sim shows how to make any city more efficient, more livable, and better connected to the environment.
