This open access book covers all facets of entity-oriented search—where " search " can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.

Written by expert scholars and practitioners, this unique Research Handbook presents the state of the art in research on, and the practice of, international design law. Combining cutting-edge research with a practical approach, it examines key trends and covers key cases, regional and national laws, as well as concepts of international design protection. In particular, the U.S. framework is compared with the regime of the EU, and issues relating to the Hague Agreement are also covered.

Jeremy Clarkson gets REALLY riled up in Round the Bend What's it like to drive a car that's actively trying to kill you? This and many other burning questions trouble Jeremy Clarkson as he sets out to explore the world from the safety of four wheels. Avoiding the legions of power-crazed traffic wombles attempting to block highway and byway, he he: - Shows how the world of performance cars may be likened to Battersea Dogs Home - Reveals why St Moritz may be the most bonkers town in all of the world - Reminds us that Switzerland is so afraid of snow that any flakes falling on the road are immediately arrested - Argues that washing a car is a waste of time Funny, globe-trotting, irreverent and sometimes downright rude, Round the Bend is packed with curious and fascinating but otherwise hopelessly useless stories and facts about everything under the sun (and just occasionally cars). It's Jeremy Clarkson at his brilliant best. Praise for Jeremy Clarkson ' Brilliant . . . laugh-out-loud' Daily Telegraph ' Outrageously funny . . . will have you in stitches' Time Out ' Very funny . . . I cracked up laughing on the tube' Evening Standard

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.
