Why is America so rich and powerful? The answer lies in our genes, according to psychologist John Gartner. Hypomania, a genetically based mild form of mania, endows many of us with unusual energy, creativity, enthusiasm, and a propensity for taking risks. America has an extraordinarily high number of hypomanics—grandiose types who leap on every wacky idea that occurs to them, utterly convinced it will change the world. Market bubbles and ill-considered messianic crusades can be the downside. But there is an enormous upside in terms of spectacular entrepreneurial zeal, drive for innovation, and material success. Americans may have a lot of crazy ideas, but some of them lead to brilliant inventions. Why is America so hypomanic? It is populated primarily by immigrants. This self-selection process is the boldest natural experiment ever conducted. Those who had the will, optimism, and daring to take the leap into the unknown have passed those traits on to their descendants. Bringing his audacious and persuasive thesis to life, Gartner offers case histories of some famous Americans who represent this phenomenon of hypomania. These are the real stories you never learned in school about some of those men who made America: Columbus, who discovered the continent, thought he was the messiah, John Winthrop, who settled and defined it, believed Americans were God’s new chosen people, Alexander Hamilton, the indispensable founder who envisioned America’s economic future, self-destructed because of pride and impulsive behavior, Andrew Carnegie, who began America’s industrial revolution, was sure that he was destined personally to speed up human evolution and bring world peace. The Mayer and Selznick families helped create the peculiarly American art form of the Hollywood film, but familial bipolar disorders led to the fall of their empires. Craig Venter decoded the human genome, yet his arrogance made him despised by most of his scientific colleagues, even as he spurred them on to make great discoveries. While these men are extraordinary examples, Gartner argues that many Americans have inherited the genes that have made them the most successful citizens in the world.

Based on in-depth interviews of successful entrepreneurs, and on the biographers of his historical subjects, Gartner defines the hypomanic temperament and its manifestations. Then he demonstrates its power in action, offering some portraits that span America’s history - Columbus who discovered America, John Winthrop who defined it, Alexander Hamilton who pointed to its future, Andrew Carnegie who built its fortune, Louis B. Mayer who glorified its ideals in movies, and Craig Venter, who is inventing its genetic future. Though these men are extraordinary figures, Gartner says many Americans carry the genes that have made them the most successful citizens in the world. What makes Bill Clinton tick? William Jefferson Clinton, the 42nd President of the United States is undoubtedly the greatest American enigma of our age -- a dark horse that captured the White House, fell from grace and was resurrected as an elder statesman whose popularity rises and falls based on the day’s sound bytes. John Gartner’s In Search of Bill Clinton unravels the mystery at the heart of Clinton’s complex nature and why so many people fall under his spell. He tells the story we all thought we knew, from the fresh viewpoint of a psychologist, as he questions the well-crafted Clinton life story. Gartner, a therapist with an expertise in treating individuals with hypomanic temperaments, saw in Clinton the energy, creativity and charisma that leads a hypomanic individual to success as well as the problems with impulse control and judgment, which frequently result in disastrous decision-making. He knew, though, that if he wanted to find the real Bill Clinton he couldn’t rely on armchair psychology to provide the answer. He knew he had to travel to Arkansas and around the world to talk with those who knew Clinton and his family intimately. With his boots on the ground, Gartner uncovers long-held secrets about Clinton’s mother, the ambitious and seductive Virginia Kelley, her wild life in Hot Springs and the ghostly specter of his biological father, Bill Blythe, to uncover the truth surrounding Clinton’s rumor-filled birth. He considers the abusive influence of Clinton’s alcoholic stepfather, Roger Clinton, to understand the repeated public abuse he invited both by challenging a hostile Republican Congress and engaging in the clandestine affair with Monica Lewinsky that led to his downfall. Of course, there is no marriage more dissected than that of the Clintons, both in the White House and on the Hillary Clinton presidential campaign trail. Instead of going down familiar paths, Gartner looks at that relationship with a new focus and clearly sees, in Hillary’s molding of Clinton into a more disciplined politician, the figure of Bill Clinton’s stern grandmother, Edith Cassidy, the woman who set limits on him at an early age. Gartner brings Clinton’s story up to date as he travels to Ireland, the scene of one of Clinton’s greatest diplomatic triumphs, and to Africa, where his work with AIDS victims is unmatched, to understand Clinton’s current humanitarian persona and to find out why he is beloved in so much of the world while still scorned by many at home. John Gartner’s exhaustive trip around the globe provides the richest portrait of Clinton yet, a man who is one of our national obsessions. In Search of Bill Clinton is a surprising and compelling book about a man we all thought we knew.
